

Cloud Storage: Backup as a Service (BaaS)

Eliminate Physical Data Backup Headaches and Costs

Your data is a critical business asset. It's the foundation for all your interactions with customers, partners, and suppliers. It provides a historical record of where your business has been and serves as the foundation for business decisions that will help you achieve all your market objectives.

So why continue to archive your critical business data using yesterday's technologies?

BriteSky's backup as a service (BaaS) eliminates the risks, costs, and processes associated with traditional physical storage options. It provides a highly secure, flexible cloud backup solution for all your critical data.

Optimize Data Backup

With BriteSky BaaS, your business IT systems are connected to a private, public, or hybrid cloud for data backup rather than an on-premises IT server. This eliminates the need for physical storage options, as well as all the management, scalability, and cost issues associated with physical storage.

Your data is safe and secure at all times. Through our managed services we take care of all data maintenance and management tasks, including upgrades and data recovery. But you retain complete control of all your data and your backup options.

Customize Cloud Storage

With complete control, you can customize your BriteSky BaaS solution to fit your unique business needs.

Our BaaS offering offers virtually unlimited flexibility and scalability to manage the ever-increasing volumes of business data. You get to choose the features and functions you need to create a custom virtual data vault. Once configured, you get a secure cloud backup environment that functions like a private cloud and reduces the risk of security breaches.

Rely on a Unique Cloud Architecture

The flexibility and security offered by our BaaS offering is enabled by BriteSky's unique Portable On-Demand Data Center (PODD) cloud architecture. The modular PODD architecture incorporates the most advanced

Move Up to Flexible Customized Storage

Eliminate the risks, costs, and processes associated with traditional physical storage:

- Create a secure, virtual data vault that is customized specifically for cloud-based data storage.
- Maintain complete control over all active, passive, and unstructured data at all times.
- Quickly and easily access additional backup resources as your business grows.

cloud networking hardware and software available to provide the highest levels of flexibility and security possible in a cloud environment. It is built on five functional layers that are optimized for enterprise cloud applications and engineered to provide complete control over the storage, management, and sharing of large volumes of active, passive, and unstructured data.

The BriteSky PODD also offers virtually unlimited room to grow and expand your virtual data vault as your needs change.

Trust a Secure Sharing Environment

BriteSky PODDs are built with the same level of cloud-based security used by banks, governments, and major credit card companies around the world to create private cloud infrastructures.

All BriteSky PODDs comply with Service Organization Control 2 (SOC 2) requirements for security, availability, processing integrity, confidentiality, and privacy for technology and cloud computing companies.

Maintain Data Sovereignty

With BriteSky's BaaS, you can also rest assured that your data will stay in Canada. BriteSky enterprise cloud solutions provide organizations in Canada with complete data sovereignty. All data remains on Canadian soil in PODDs located in Tier 3 Canadian data centers.

Additionally, your data remains yours — fully secured from data mining. You always retain all rights and controls.

Streamline Your Transition to Cloud Storage

Moving away from traditional storage options can be difficult, so we've structured our BaaS offering to make your move to the cloud as simple and seamless as possible.

We provide the virtual data vault, you choose the options that suit your business, and we work with your IT, compliance, and legal teams to manage your migration to the cloud.

If your business is still using older, legacy tapes for backups, BriteSky can migrate that data as well. This means you don't have to maintain outdated hardware and software to access an obsolete technology, just in case you need to access data stored on traditional tapes.

Partner With BriteSky

At BriteSky, enterprise cloud provisioning is not a sideline. It's our singular focus. Our enterprise cloud solutions and services are engineered and architected specifically for the unique information technology needs of medium and large enterprises. All BriteSky enterprise clouds are built using best-of-breed technology by a team of highly skilled and dedicated engineers with decades of real-world data center experience and expertise. They are structured to provide the most flexible, cost-effective, and secure enterprise cloud services and solutions for Canadian businesses.
