

## COMPANY OVERVIEW

## Enterprise Cloud. Simplified.

Cloud-based services offer a variety of financial and operational benefits. But with so many services, a confusing list of technology options, and complex pricing models, choosing the right cloud solution for your business can be complicated.

BriteSky simplifies the process. We make it easy for you to make your move to the cloud with the most flexible, cost-effective, and secure enterprise cloud services for Canadian businesses.

Our unique cloud solution and our complete portfolio of managed cloud services make it easier to build the enterprise cloud environment you really need. Once configured, you can store, manage, and share large volumes of data in highly secure virtual vaults that are customized for your business.

### Tie Cloud Services to Business Needs

Bridge the gap between your current IT infrastructure and a secure, virtual BriteSky data vault with our managed cloud services:

- **Cloud storage services** that eliminate the need for traditional storage for active and passive data and use a virtual data vault for cloud-based services and applications.
- **Off-site cloud backup services** that eliminate the need to buy, build, and manage a backup infrastructure, as well as tape libraries, external drives, backup software, off-site storage, and separate networks.
- **Hybrid cloud integration services** that let you integrate custom clouds with an existing infrastructure to protect existing IT investments and give you more flexibility for future upgrades.
- **Virtual machines** that reduce the number of on-premises physical servers you need and allow multiple operating systems and applications to sit together in one enterprise cloud environment.
- **Business continuity services** that ensure your data and infrastructure remain secure and available in an emergency or disaster situation.
- **Secure file sharing** that provides a variety of sharing features, including file versioning, encryption, annotation, syncing in a Bring Your Own Device (BYOD) environment, as well as syncing of desktop and remote devices to selected mobile devices.

### Increase Profitability

- **Lower IT costs** by reducing capital, operating, management, training, and support costs associated with developing, building, and maintaining a data center.
- **Manage ongoing costs** by moving to a predictable pricing model based on features and functions rather than one-size-fits-all cloud solutions that are priced based on complex and unpredictable pricing strategies tied to monthly storage and computing space usage.
- **Get to market faster** with new products and services that fit specific marketing and sales requirements.
- **Increase productivity** by introducing and scaling new services quickly and easily when you need them.
- **Protect business intelligence** with the highest levels of security and availability for your data.

## Trust a Completely Secure Cloud

BriteSky enterprise clouds are enabled by our unique, modular Portable On-Demand Data Center (PODD) cloud architecture. This architecture is built on five functional layers that are optimized for enterprise cloud applications and engineered for flexibility and security.

With a BriteSky PODD, you get to choose the features and functions you need to create a custom virtual data vault that comes with the same level of cloud-based security used by banks, governments, and major credit card companies. Once configured, the PODD provides a secure cloud environment that functions like a private cloud and reduces the risk of security breaches.

The BriteSky PODD architecture also complies with Service Organization Control 2 (SOC 2) requirements for security, availability, processing integrity, confidentiality, and privacy for technology and cloud computing.

## Maintain Data Sovereignty

A BriteSky enterprise cloud solution provides organizations in Canada with complete data sovereignty. All data remains on Canadian soil in PODDs located in Tier 3 Canadian data centers.

Additionally, your data remains yours — fully secured from data mining. You always retain all rights and controls.

## Stay in Control

No matter which BriteSky cloud services you adopt, you maintain complete control over all of your active, passive, and unstructured data at all times. This makes it easier to use your data to improve business processes, increase competitiveness, and meet regulatory compliance requirements.

The modular PODD architecture gives you the flexibility and scalability to add cloud services and expand your virtual data vault as your needs change.

Plus, you can manage your custom public, private, or hybrid cloud environment, or let our experienced team of data center experts manage it for you.

## Simplify Your Move to the Cloud

At BriteSky, enterprise cloud provisioning is not a sideline. It's our singular focus. Our enterprise cloud solutions and services are engineered and architected specifically for the unique information technology needs of medium and large enterprises. All BriteSky enterprise clouds are built using best-of-breed technology by a team of highly skilled and dedicated engineers with decades of real-world data center experience and expertise. They are structured to provide the most flexible, cost-effective, and secure enterprise cloud services and solutions for Canadian businesses.

Simplify your move to the cloud. Partner with BriteSky.
