

Network Security: Firewall as a Service (FWaaS)

Prevent Malicious Intrusions and Reduce Costs

Your network firewall is the first line of defense against cyberattacks. But continuously evolving threats and the unwavering persistence of attackers makes it difficult to ensure your firewall is always prepared to protect your network.

BriteSky eliminates the challenges of firewall management and maintenance with a customizable firewall as a service (FWaaS) solution that reduces security management costs and ensures your firewall is always ready to block malicious attacks.

Customize Network Edge Protection

BriteSky's FWaaS is a scalable, on-premises, managed service solution that provides small, medium, and large enterprises with cost-effective protection from malicious software and network intrusions. This flexible solution is engineered to integrate easily with on-premises networks connecting to any external network or enterprise cloud environment, including BriteSky enterprise clouds. The complete managed service for a single firewall includes:

- Network security analysis and recommendations
- Firewall deployment and integration (if needed)
- Ongoing management and maintenance of one firewall appliance
- 24/7 traffic monitoring and analysis
- Regular firmware upgrades and patch management
- Weekly signature monitoring and management
- Five standard configuration changes per month

This end-to-end service can be customized and scaled to enable management of multiple firewalls and additional port configuration changes per firewall each month, as needed.

For maximum protection, BriteSky FWaaS can also be paired with BriteSky's security information and event management as a service (SIEMaaS) solution to create a complete monitoring and protection system. BriteSky SIEMaaS is a customizable security management solution that delivers actionable rule-based security intelligence right to your desktop.

Maximize Network Protection

Regardless of how your security management system is customized, you can rest assured your network is always protected. BriteSky FWaaS is enabled by

Optimize Firewall Management

Protect your network and data with an advanced, managed firewall solution:

- Integrate on-premises firewall protection that continuously adapts to address changing threat profiles.
- Reduce capital, operating, management, training, and support costs associated with managing and maintaining advanced firewall protection systems.
- Quickly and easily add additional firewalls to protect your central network and additional branch locations.
- Avoid vendor lock-in with a technology-agnostic solution.

PRODUCT BRIEF

the BriteSky Log Aggregator, a central, on-premises aggregation point for your network security logs. This powerful event logger streamlines and consolidates all logs and delivers them as a single data stream to analysts in the BriteSky Defensive Cyber Operations Center (DCO) over a secure virtual private network (VPN) connection.

To support ongoing firewall management, the BriteSky Log Aggregator includes software tools that allow on-site and remote firewall access. With these tools, BriteSky network security experts can access the firewall securely and program automated configuration changes and protection upgrades based on consolidated event logs.

For maximum oversight of the network and the firewall, the BriteSky Log Aggregator is engineered to continue collecting logs for up to 72 hours after an internet service disruption and deliver them to the BriteSky DCO when service is restored. This provides virtually uninterrupted firewall management and maintenance that ensures your firewall is always optimized to deliver the highest level of protection.

Trust a Proven Security Management System

With BriteSky FWaaS you can maintain a trusted and secure collaboration environment for employees, partners, and suppliers.

BriteSky FWaaS provides the same level of firewall protection used by banks, governments, and major credit card companies around the world. Collected data and reports are treated as secret level information and stored in Canada in BriteSky's secure Tier 3 data centers. Additionally, your data remains yours — fully secured from data mining. You always retain all rights and controls.

Streamline Your Transition to a Managed Firewall

Moving to a managed firewall solution can be difficult, so we've structured our FWaaS offering to make your move as simple and seamless as possible.

We conduct an in-depth network security analysis and provide detailed recommendations, you choose the options that suit your operation, and we work with your IT team to integrate the FWaaS solution that fits the unique needs of your business.

Partner With BriteSky

BriteSky managed security as a service solutions are engineered and architected specifically for the unique information technology needs of medium and large enterprises. These solutions are built using field-proven network security methods and best-of-breed technologies by a team of highly skilled and dedicated engineers with decades of real-world experience and expertise building security protection systems for enterprises across Canada. They provide the most flexible, cost-effective, and advanced security management processes and services for Canadian businesses.
