

BRITESKY DETECT

Endpoint Telemetry

Purchasing, deploying, and managing commercial Endpoint Detection and Response (EDR) solutions is a very expensive proposition for enterprises. While EDR solutions provide critical cyberprotection capabilities, they also come with extremely high license subscription and capital costs that put them out of reach for many enterprises.

BriteSky Detect dramatically reduces the cost of EDR capabilities so they're accessible to any medium to large enterprise. You have a fully customizable endpoint behavior telemetry solution with no monthly licensing fees for the enabling technologies.

Stay Ahead of Adversaries

Increase visibility of activities at all server and workstation endpoints to stay ahead of malicious attacks every step of the way. BriteSky Detect:

- Collects, aggregates, and analyzes system and network intelligence to detect suspicious behavior that aligns with the Mitre ATT&CK framework.
- Pairs with BriteSky Respond to automatically respond to any threats detected with the required action, whether that's blocking a file hash, triaging an endpoint, or removing a host from the network using automated or semi-automated playbooks.

Protect Any Platform

BriteSky Detect offers agents for a wide variety of platforms, including Windows, MacOS, and Linux.

Get Fully Integrated Detection and Response Technologies

With BriteSky Detect, you gain fully integrated risk detection and response capabilities that combine the advantages of each technology:

- Open source agents provide a trusted and very cost-effective way to collect endpoint security events and forward them for analysis and correlation.
- BriteSky Surveil provides Security Information and Event Management (SIEM) that includes an analytics engine for asset modeling, network-based logs for context, and threat intelligence feeds to enhance detection fidelity.

Reduce Security Risks

Choose cutting-edge endpoint risk detection and response services that are aligned with your cybersecurity priorities and budget realities:

- Reduce the capital and operating costs associated with deploying and maintaining commercial off-the-shelf EDR solutions.
- Adopt a flexible approach to risk detection and response to keep pace with constantly evolving cyberthreats.
- Take a building block approach to cybersecurity, augmenting BriteSky Detect with additional services whenever needed.

Get fully
integrated
risk detection
and response
capabilities.

- BriteSky Respond provides Security, Orchestration, and Automated Response (SOAR) that goes well beyond the simple agent responses that commercial EDR products offer to provide complete remediation and blocking capabilities, from endpoint blocking to network- and identity-based actions.

Add New Cybersecurity Services on Demand

Use BriteSky Detect on its own, or combine it with any of our managed cybersecurity services today, or in the future, through BriteSky Fortress.

BriteSky Fortress is a unique, modular solution that can be rapidly deployed through a single BriteSky Lightweight Appliance (BLA). To complement BriteSky Detect, you can choose:

- **BriteSky Indicate** for threat intelligence
- **BriteSky Protect** for managed firewall services
- **BriteSky Recon** for vulnerability management
- **BriteSky Respond** for Security, Orchestration, and Automated Response (SOAR)
- **BriteSky Surveil** for managed Security Information and Event Management (SIEM) on premises or in the cloud for SIEM as a Service (SIEMaaS)

You can also combine the BriteSky Detect service with our customized **BriteSky Cloud** products and solutions to create a high-security enterprise cloud environment.

Leverage Our Compliance

At BriteSky, we constantly adopt and evaluate ourselves against industry best practices and certifications. All of our staff have Government of Canada Secret (Level II) clearance. In addition, our cybersecurity products and solutions adhere to the following certifications and accreditations which are renewed annually:

- SOC 2 Type 2
- ISO 27001: 2013
- ISO 27017 and ISO 27018
- SAP cloud and infrastructure operations
- ITSG-33 Protected B Cloud Assessment completed by the Canadian Center for Cyber Security (CCCS) and Communications Security Establishment (CSE)

Our managed cybersecurity services provide Canadian enterprises with data residency and data sovereignty. All data, including security logs, events, and remediation actions, remains on Canadian soil, managed from a state-of-the-art security network operations center in Ottawa.

BriteSky is Canadian-owned and -operated. We will never copy, review, or mine your corporate data or IP for any purpose. All data rights and controls remain property of your organization.

Rely on Field-Proven Expertise

BriteSky Detect leverages our decades of real-world experience designing, building, delivering, and supporting custom cybersecurity solutions for leading enterprises, governments, and banking institutions across Canada.

Our highly skilled engineers have extensive expertise in cybersecurity, networking, cloud, and data center technologies. They incorporate only best-of-breed hardware and software from leading vendors into our solutions.
