

BRITESKY INDICATE

Threat Intelligence

The fast-moving nature of the cybersecurity landscape makes it difficult for enterprises to ensure their cybersecurity strategies, tactics, and technologies are always aligned with the latest threats and risks.

BriteSky Indicate gives you the insight needed to keep pace with ever-changing threats and make fast, informed decisions. You have a fully customizable threat intelligence solution that aggregates threat data from a wide variety of sources and converts it to intelligence you can act on.

Put Network Intelligence to Work for Your Business

Combine the threat intelligence provided by BriteSky Indicate with your other cybersecurity solutions to provide more context to the data collected across your network environments and automate responses:

- Integrate feeds from BriteSky Indicate into BriteSky Surveil or another Security Information and Event Management (SIEM) solution to improve your ability to identify malicious and suspicious activities.
- Customize the feeds ingested by BriteSky Indicate to include those that are most relevant to your business and industry.
- Use BriteSky Respond to automatically block discovered indicators of compromise (IOCs) at the network or host level.

Alternatively, you can use BriteSky Indicate without an SIEM solution. In this case, it functions as a standalone database for threat intelligence and does not detect IOCs in your network.

Get a Consolidated View of the Risks You Face

With BriteSky Indicate, you have high-fidelity data that provides a more current database of indicators than you could possibly develop on your own. BriteSky Indicate gathers information from a broad set of internal and external sources, including:

- Data from internal security cases
- Public threat intelligence feeds
- Technology blogs and research reports
- Security alerts and advisories

It then deduplicates all collected data so you can import it into your SIEM solution to actively monitor it for evidence of the indicators present in your network.

Customize Your View of the Threat Landscape

With BriteSky Indicate, you have complete flexibility to choose and change the feeds that BriteSky Indicate subscribes to at any time. You can also tailor the information, for example, to suit your industry.

threat data
into actionable
intelligence.*

Add New Cybersecurity Services on Demand

You can use BriteSky Indicate on its own, or combine it with any of our other managed cybersecurity services today, or in the future, through BriteSky Fortress.

BriteSky Fortress is a unique, modular solution that can be rapidly deployed through a single BriteSky Lightweight Appliance (BLA). To complement BriteSky Indicate, you can choose:

- **BriteSky Detect** for endpoint telemetry
- **BriteSky Protect** for managed firewall services
- **BriteSky Recon** for vulnerability management
- **BriteSky Respond** for Security, Orchestration, and Automated Response (SOAR)
- **BriteSky Surveil** for managed Security Information and Event Management (SIEM) on premises or in the cloud for SIEM as a Service (SIEMaaS)

You can also combine the BriteSky Indicate service with our customized **BriteSky Cloud** products and solutions to create a high-security enterprise cloud environment.

Leverage Our Compliance

At BriteSky, we constantly adopt and evaluate ourselves against industry best practices and certifications. All of our staff have Government of Canada Secret (Level II) clearance. In addition, our cybersecurity products and solutions adhere to the following certifications and accreditations which are renewed annually:

- SOC 2 Type 2
- ISO 27001: 2013
- ISO 27017 and ISO 27018
- SAP cloud and infrastructure operations
- ITSG-33 Protected B Cloud Assessment completed by the Canadian Center for Cyber Security (CCCS) and Communications Security Establishment (CSE)

Our managed cybersecurity services provide Canadian enterprises with data residency and data sovereignty. All data, including security logs, events, and remediation actions, remains on Canadian soil, managed from a state-of-the-art security network operations center in Ottawa.

BriteSky is Canadian-owned and -operated. We will never copy, review, or mine your corporate data or IP for any purpose. All data rights and controls remain property of your organization.

Rely on Field-Proven Expertise

BriteSky Indicate leverages our decades of real-world experience designing, building, delivering, and supporting custom cybersecurity solutions for leading enterprises, governments, and banking institutions across Canada.

Our highly skilled engineers have extensive expertise in cybersecurity, networking, cloud, and data center technologies. They incorporate only best-of-breed hardware and software from leading vendors into our solutions.
